

International Workshop on Financial Technology and Security 2019

Call for papers

Financial technology (FinTech) is the new technology that aims to compete with traditional financial methods with a great impact on whole of society. Advances in the capability of data computing and processing have ignited an explosion in paradigm, driving FinTech forward at an ever-accelerating rate with unprecedented new financial services. In light of the rise in interest around FinTech, both the research community and industry must intensify the attention given to overcoming the trust, security and privacy challenges germane to FinTech to unleash its full potential. User experience, development, implementation and security are emerging as new concerns and are being followed by new services addressing them.

The event will bring together an opportunity to share ideas of academic and industry professionals about recent progress in the financial technology space, including systems and models, applications and services, novel technologies, and security issues.

Organized by **ITRC Fintech Security Research Center, Chungman National University.**

Contacts: Program Chair, Prof. WonHawn Park(park54966533@gmail.com)

The workshop stands for the continuously evolving and converging technologies on FinTech, including (but are not limited to):

- Algorithms, Models, Applications, and Services
- Blockchain networks and Cryptocurrency
- Security and Privacy issues
- Wearables, Body Sensor Networks, Smart Portable Devices
- Next-Generation Payment Services
- Usable and Intelligent Authentication Methods
- Big data and Machine learning
- Artificial intelligence and its role in financial services
- Social Behavior and Customer Experience Management
- Data Visualization and Analytics in Financial Services
- Converged ICT Applications and Services

Submission: <http://www.confmanager.net/bic2019> (Topics: **International Workshop on Financial Technology and Security 2019**)
